EDUCATION

University of South Florida

Bachelor of Science in Computer Science

- **GPA:** 3.72/4.00

Tampa, FL

Aug. 2025 – May 2026

Universidad del Norte

Bachelor of Science in Systems Engineering

- **GPA:** 4.63/5.00

Barranquilla, Colombia

Feb. 2021 – May 2026

EXPERIENCE

Restaurante Chi Kon

Data Engineer

Feb. 2024 – Jul. 2025

Barranquilla, Colombia

- Developed ETL/ELT pipelines using Python and SQL to integrate sales, inventory, and supplier data into a centralized analytical database.
- Designed dimensional data models (Star Schema) and built Power BI and Tableau dashboards to analyze sales, inventory, costs, and profitability.

Outlier

RLHF AI Trainer

Jan. 2025 – Feb. 2026

Remote

- Contributed to Reinforcement Learning from Human Feedback (RLHF) projects focused on evaluating and improving large language models (LLMs).
- Evaluated AI-generated solutions for correctness, efficiency, edge cases, and instruction adherence to improve model reliability and performance.

PROJECTS

AutismInsight – Conversational Support Chatbot

- Developed an AI-powered chatbot using LLMs (e.g., GPT-3/4 APIs) and rule-based logic to provide emotional support and autism-related resources.

Calcium – Collaborative Whiteboard and Code Editor

- Built a real-time collaborative whiteboard featuring editable code snippets, drawing tools, and integrated chat using WebSockets and Socket.io.
- Implemented syntax highlighting and live code execution in a sandboxed environment supporting languages such as Python and JavaScript.

EEG Signal Analysis Software for Alzheimer's Detection

- Developed an EEG-based detection system using signal processing techniques (FFT and wavelets) and Convolutional Neural Networks (CNNs) to classify Alzheimer's-related biomarkers and visualize brain activity patterns.
- Integrated LLM-based explainability features and developed a graphical interface displaying anomaly heatmaps, confidence metrics, and model interpretations.

LEADERSHIP & ACTIVITIES

Artificial Intelligence Research Group

- Contributed to machine learning research projects and EEG signal analysis for Alzheimer's disease detection.

Barranqui-IA Hackathon 2024 – 2nd Place

- Developed an AI-powered predictive model MVP during a 48-hour innovation challenge.

TECHNICAL SKILLS

Programming Languages: Python, R, SQL, COBOL, Java, C++, HTML, JavaScript, TypeScript, Go.

Data & Artificial Intelligence: Machine Learning, Deep Learning, Data Analytics, PySpark, Data Pipelines, Big Data, ETL/ELT, RAG, AI Agents, Vector Databases, MLOps, RLHF, Databricks.

Tools & Platforms: Azure, AWS, Google BigQuery, Docker, Git, Jupyter Notebooks, Power BI, Tableau, Linux, Agile, n8n, OpenClaw, Claude, Databricks, Codex, Excel.
